

Visual literacy practices for learning designers

Enhancing your visual literacy skills isn't just about understanding visuals; it's about using them to make your online courses more effective. Here are some practical tips for learning designers:

- **Evaluate visuals for educational effectiveness:** When selecting an image or video, ask yourself if it helps achieve the learning objectives. Does it make a concept clearer? Can it replace a long text explanation? Does it engage students in a way that words alone might not?
- **Integrate visuals thoughtfully:** Place visuals where they will have the most impact. For example, an introductory video might be best at the start of a course to engage and motivate learners, while diagrams could be interspersed within the text to illustrate key points as they arise.
- **Create custom visuals when necessary:** Sometimes the perfect visual doesn't exist, and you might need to create it. Tools like Canva or Adobe Spark make it easy to create professional-quality images and graphics, even for those without a graphic design background. Also, the DX team is there to help.
- **Consistency is key:** Use a consistent style and quality of visuals throughout your course. This not only looks more professional but also helps create a cohesive learning experience. Consistent use of colours, fonts, and layout can help reinforce learning as students know what to expect visually.
- **Seek feedback:** Get feedback on your visuals from colleagues or focus groups made up of potential students. What makes sense to you might not be clear to others, and different perspectives can help you identify which visuals work best.
- **Stay updated:** Visual literacy and design trends evolve, so it's important to stay informed about new tools, techniques, and best practices. This can involve attending workshops, following relevant blogs, or participating in online forums.

By applying these practices, you can more effectively use your visual literacy skills to select and create visuals that enhance learning and make your online courses more engaging and effective.
